CPR for an Infant If providing CPR for an infant the ratio of compressions to breaths remains the same but the method of performing compressions changes. For an infant you should use 2-3 fingers in the center of the chest on the lower half of the breast bone to compress the chest about 1 ½".

### 2019-2020 CPR Guidelines American Red Cross (Review)

The establishment of a TC supports the AHA mission. The training needs of a given area are based on geography, population, corporate/community needs, and the healthcare environment. The relationship of the TC with the AHA does not place the AHA in a conflict of interest.

### ECC Training Center Criteria - American Heart Association

The AHA guidelines "strongly recommend" that untrained / lay responders perform "compression-only" CPR, sometimes known as CCR. However, medical professionals and trained lay people are still urged to give the victim two "rescue breaths" in between each series of 30 chest compressions. All the changes apply only to adult victims who collapse of cardiac arrest; artificial respiration is still recommended for children and for adults in a few cases, including near-drowning and drug overdose.
