Lesson 5: Conduction, Convection, Radiation

- explain how heat moves from one place to another including how cooler materials can become warmer and vice versa
- describe how heat moves by conduction, convection, and radiation
- give examples of heat transfers that occur in every day situations

Vocabulary conduction: the transfer of heat through a material by direct contact

Solutions Manual to accompany - Civil Team

Like many kinds of homespun advice, this is bad advice Alltypes of heat transfer; conduction, convection, and radiation vary directly with area The surface area of the head is much less than that of the other portion of the body and thus will lose less heat This may be shown experimentally by comparing exposure in cold weather wearing
