### ances Adv in Wheat Genetics: From Genome to Field

Wheat production can be severely damaged by endemic and invasive insect pests. Here, we investigated resistance to cereal leaf beetle in a panel of 876 winter wheat cultivars, and dissected the genetic architecture underlying this insect resistance by association mapping. We observed an effect of heading date on cereal leaf beetle infestation, with earlier heading cultivars being more heavily ...

As a model system in classical plant genetics, the genus *Antirrhinum* has been well studied, especially in gametophytic self-incompatibility, flower development biology, and transposon-induced mutation. In contrast to the advances in genetic and molecular studies, little is known about *Antirrhinum* cytogenetics. In this study, we isolated two tandem repetitive sequences, CentA1 and CentA2, from ...
