The Atomic Structure: It was discovered that an atom is made up of three types of sub-atomic particles; these are protons, neutrons and electrons. It was also discovered that in the center of an atom, there is a Nucleus which is made up of protons and neutrons. Around the nucleus there are energy shells in which electrons are.

Each proton carries an electric charge of +1, so the atomic number also specifies the electric charge of the nucleus. In the neutral atom, the Z protons within the nucleus are balanced by Z electrons outside it. Atomic numbers were first worked out in 1913 by Henry Moseley, a young member of Rutherford's research group in Manchester.
