Acura 3.2 Cl Ti **Not Working | It Still Runs**

The blower motor relay supplies power to this motor when you turn the switch to "on" that can sometimes fail. When this happens, you may notice that you will not feel anything blowing out of the vents at all. This may also cause the blower motor to work intermittently.

My high speed on my blower not working new resistor motor...

If your blower is not working on speed 5 then the blow motor resistor (I think its called that) is burnt and you need a new one. It is a 5 minute fix. The resistor is located under the passenger side glove box. You just remove the black plastic molding below it and then pop out of the old one and plug in the new one.
