Vegetation Classification Reports and Maps

Of California's total plant population, 2,153 species, subspecies, and varieties are endemic and native to California alone, according to the 1993 Jepson Manual study. This botanical diversity stems not only from the size of the state, but also its diverse topographies, climates, and soils (e.g. serpentine outcrops).

List of California native plants - Wikipedia

The Jepson eFlora is the foremost authority on the native and naturalized vascular plants of California.
