installing one or two amplifiers as an upgrade, the next step will be to decide the mounting location for the amp. Mount an amplifier less than three feet from the car's radio or bolt it directly to the vehicle's metal chassis, and you'll hear a lot of annoying static, buzzing, and humming over your music.

The turn-on wire (also called the remote wire) is located behind the stereo. On aftermarket stereos, it's usually a blue and white wire.

The remote wire will "tell" your amplifier to turn on whenever the stereo is powered up (usually, whenever the vehicle is turned on).

You'll have to remove

The first power you'll want to check for is the constant 12V wire, so set your multimeter to the appropriate scale, connect the ground lead to a known good ground, and touch the other lead to each wire in the speaker wire.

When you find one that shows approximately 12V, you have found the constant 12V wire, which is also referred

The power wire coming from the stereo is usually red, and likely will connect to a red wire from the car. The ground wire for the stereo will be black, as will its corresponding wire from the car. If there is no ground wire, you can secure the ground cable to bare metal in the body of the car to serve as a ground.
