Graphs. Direct relationship- as x gets bigger, y gets bigger. For example, the relation ship between age and size (until maturity) is a direct relationship. Inverse- as x gets bigger, y gets smaller. For example, the relationship between time spent at the mall and the amount of money in your pocket is an inverse relationship.

Introduction to Earth Science

Line graphs are normally considered to be the most accurate kind of graphs in science because they can represent small changes in variables. Line graphs are loved because they can represent a wide range of data beautifully. When drawing line graphs in science, be sure to note and label all the parts of your graph to make them easier to read.
