Chlorine is a problem because it can degrade the polyamide thin film composite RO membrane, which is the most common membrane used in residential applications . A carbon pre-filter is typically used to remove chlorine. •Iron. Iron can clog the membrane by precipitating on it.

Water Treatment Fundamentals

Water that has 10⁻⁷ gram equivalents per liter of hydrogen is said to have a pH of 7. Thus a neutral solution exhibits a pH of 7." Special Notation: pH is logarithmic- a change of one pH unit corresponds to a ten fold change in acid concentration. pH has an inverse nature: Acid concentration increases as the pH value decreases
