1 On November 4,1976, Gödel mentioned some details on this point. At that time (1926 and soon after), he agreed with them that the existing state of philosophy was poor (not necessary but just a historical accident), and, in substance, agreed only with their method of analysis of philosophical and scientific concepts (using mathematical logic).

As well, building on a result of Wilkie, in Logic Colloquium '84 (North-Holland, 1986, pp. 355-377), A. Woods showed that AO definable sets of integers form a proper hierarchy, provided one counts the number of bounded quantifiers rather than the number of alternations of bounded quantifiers.
