Microsoft Dynamics Nav Dimensions Fact

The maximum number of dimensions is 10 and the total number of elements in all dimensions is 1,000,000. For example, to define an integer array with dimensions 3 x 3 x 4, start by creating an integer variable called A. In the Properties window, set the Dimensions property to a value of 3:3:4. To access the elements in the array, use either of the following:

Dimensions Property - Dynamics NAV | Microsoft Docs

A Dimension is the term used in Microsoft Dynamics NAV to define an analysis category. Dimensions are used to group, or categorize, data for the purpose of analysis. Dimensions consist of Dimension Values. A Dimension Value is a "subcategory" or a "tag" attached to data to conduct meaningful analysis (think of them like article tags on a blog).

Microsoft Dynamics NAV Dimensions Fact Sheet

In my last post, I went into some detail about default dimensions in NAV and options for value posting. I also showed how the system reports posting errors when values don't match the choices made in default dimensions. Fortunately, you can work around this by controlling how your dimensions post, using dimension combinations. I'm going to [...]
