Describe the population dynamics of A: 1. Which pattern represents the predator, which the prey? ... Round your answer to the nearest month.

AP Biology Ecology Review and Study Guide

Population Ecology. A population is a group of interbreeding organisms that are members of the same species living in the same area at the same time. Organisms that are all members of the same species, a population, are called conspecifics. A population is identified, in part, by where it lives; its area of population may have natural or artificial boundaries.
