Objectives: To investigate the association between infection or respiratory tract disease and future risk of developing idiopathic inflammatory myopathy (IIM). Methods: A case-control study was performed using Swedish nationwide registers. Adults with newly diagnosed IIM were identified (2002-2011) from the National Patient Register (NPR) and the Swedish Rheumatology Register (n=957).

PubMed

Patients who had stopped smoking had lower rates of death due of coronary heart disease , cerebrovascular disease, lung cancer, and other respiratory disease as compared with those assigned to usual care who continue to smoke. [1] Fig. 4. Effect of smoking cessation on mortality cause at 14.5 years in the Lung Health Study.

Cloth masks have been used in healthcare and community settings to protect the wearer from respiratory infections. The use of cloth masks during the coronavirus disease (COVID-19) pandemic is under debate. The filtration effectiveness of cloth masks is generally lower than that of medical masks and respirators; however, cloth masks may provide some protection if well designed and used correctly.
