Why Do Buses Come in Threes: The Hidden Mathematics of ...

In reality, buses usually come in twos. Only on long bus routes is it common for buses to come in threes. The reason for this phenomenon is that buses often make long stops to allow large groups of passengers to board. When this happens, the next bus on the route usually approaches before the bus preceding it departs. A bus route must be very long for a third bus to join the bunch. Therefore, buses usually come in twos; only on very long routes do they come in threes.

These things can help - but the ubiquity of bus bunching suggests that they can't eliminate the problem altogether. So the next time someone in your hearing asks why it is that buses all come along at once, you can reply, "Mathematical inevitability". Then you can look smug about it, as they, presumably, decide that they'd rather walk.

The old joke that you wait ages for one bus, then three come along at once, is bordering on cliché. But it's also, as it turns out, true - not just because of bad planning, but also because of maths. The phenomenon is so common, in fact, that it has a choice of names. Bus bunching, clumping, convoying, platooning - all relate to the depressing reality that, over any length of time, buses serving a single route are likely to end up tootling along directly behind each other.
